

Feedback from candidates that have completed the SAICA / UJ – Future of Accountants 4.0 course

RATED ON SCORES OF 1 - 5

Learning Outcomes

4.42

The learning outcomes of the module were clearly communicated.

Learning Materials

4.36

The learning materials used in the module facilitated my learning.

Academic Level

4.32

The module was at an appropriate academic level.

Development of Life Skills

4.27

The module supported the development of life skills.

Videos

4.24

Videos supported my learning process.

Additional Materials

4.30

The additional materials provided supported my learning.

AVERAGE OUT OF 5

OTHER POSITIVE COMMENTS THAT CAME FROM THE FEEDBACK WAS:

This unit facilitated me with the basis of how block chain work, I was very interested so did more research

Great Unit

Great topic

The videos was very useful

Great

Learning about AI and it's uses was interesting

Very interesting additional material

Insightful

OTHER FEEDBACK RECEIVED BELOW:

How were you able to bridge skill or knowledge gaps?	How did you achieve your personal learning goals or objectives?	Positives from the course
Helped get a better understanding of technology I had heard of but didn't fully understand.	Got a better understanding of how accountants should be reacting to these future changes.	I would definitely say the knowledge gain was a big positive.
Knew very little and was great introduction. Afterwards reading futher on subject matter made it more understandable.	Gained a better understanding and depth of knowledge on subject.	I have a better knowledge of how AI will have an impact on the profession in the future.
Further research, and reading/videos from public domain sources.	To get a solid basic understanding of 4IR and the direction is it heading.	Geared me to research further into making my career relevant into the future.
I had notions of what some of the concepts were from articles etc I have read, but not an understanding explaining the concepts fully.	Through the course I was able to obtain a better understanding of the 4IR and its possible implications on my current and future roles.	 
I have always had questions or uncertainties as to what artificial intelligence is and through the real life examples (especially the videos) I was able to fill that knowledge gap. The skill gap still needs filling but I am patient with that given that 4IR is still in progress for the most part in South Africa.	I wanted to get a high level idea on the impact of the 4IR on accountants as well seeing how I can make myself relevant in this area.	
By using the study material provided.	By using the study material provided.	
I was able to understand the link between accounting functions and the 4IR.
